Forte 'C'	6.0	N - 30 day eval copy
GZIP	1.2.4	N
Midas Base Client Midas 50 User		N -Converts Lotus RTF to Standard RTF

Wayne was able to type up a draft of the installation notes. We'd like to go over the routine and install everything again to make sure we didn't miss anything but it looks like we'll run out of time with the machine we have here. I'm out of the Office Monday but available via cell if needed or contact Rob Shina.

We need to add the Oracle installation information which will be ready COB Monday and forwarded to you. One note these notes are based on the Sun Solaris installation and our target Oracle platform looks like it will be HP/UX and need to adjust accordingly. In other words, I'm not sure how helpful they're going to be anyway.
